2023 ParkScore Index®

47

52.5

Santa Clarita, CA

The ParkScore index is a national comparison of park systems across the 100 most populated cities in the United States. Published annually, the index measures park systems according to five categories reflective of an excellent city park system: access, investment, amenities, acreage, and equity. While the rankings provide fodder for friendly competition, the goal each year of publishing the index is to help leaders advocate for needed park resources and provide relevant data to inform local park improvement efforts. To facilitate a fair comparison across cities, the index aggregates across all public and private organizations supporting parks in each city.

This year, Santa Clarita received a score of 52.5 points out of 100 based on an average of the five categories. There are 14 measures across these categories, with points awarded based on how Santa Clarita compares to the other 99 cities for that particular measure.

74 out of 100 points

38

Acreage

The acreage score indicates the relative abundance of large 'destination' parks, which include large natural areas that provide critical mental health as well as climate and conservation benefits. There are two components to the acreage score. Of these, Santa Clarita scores among the highest on the percentage of the city's overall area that is dedicated to parkland (100 out of 100 points), and about average on median park size (47 out of 100 points).

Access

The access score indicates the percentage of a city's residents that live within a walkable half-mile of a park - the average distance that most people are willing to walk to reach a destination. With 52% of its population living this close to a park, Santa Clarita scores below average in this category.

Investment

The investment score indicates the relative financial health of a city's park system, which is essential to ensuring the park system is maintained at a high level. This value aggregates park and recreation spending across all agencies and organizations within the city, including monetized volunteer hours. In Santa Clarita, a total of \$224 per capita is spent each year on publicly accessible parks and recreation, among the highest for this category.

Amenities

The amenities score indicates the relative abundance of six park activities popular among a diverse selection of user groups (kids, teenagers, adults, seniors). Overall for this category, Santa Clarita scores below average, though it varies by amenity: basketball hoops (28 points out of 100), dog parks (45 points), playgrounds (30 points), senior and rec centers (57 points), permanent restrooms (66 points), and splashpads (1 points).

25 out of 100 points

Equity

The equity score indicates the fairness in the distribution of parks and park space between neighborhoods by race and income. This category is an average of two types of metrics. On the first set of measures, Santa Clarita scores below average: 24 out of 100 points for people of color living within a 10-minute walk of a park and 26 points for low-income households. The second set of measures compare the distribution of park space. In Santa Clarita, residents living in neighborhoods

of color have access to 32% less nearby park space than those living in white neighborhoods (43 points out of 100). Residents living in lower-income neighborhoods have access to 76% less nearby park space than those in higherincome neighborhoods (8 points out of 100).

menities (38 Points)						
Basketball hoops	66 hoops	2.85 per 10,000 residents	28 points	.94	7.70	
Dog parks	3 dog parks	1.29 per 100,000 residents	45 points	.27	2.55	
Playgrounds	54 playgrounds	2.33 per 10,000 residents	30 points	.98	5.56	
Senior/Rec centers	11 centers	0.95 per 20,000 residents	57 points	.21	1.52	
Restrooms	46 restrooms	1.99 per 10,000 residents	66 points	.13	2.93	
Splashpads	0 splashpads	0.00 per 100,000 residents	1 points	.10	2.64	

*For each of the 14 measures, cities are scored on a 1-100 scale (100 is the highest) based on how they compare to the other 99 cities. To adjust for outliers, 100 points is awarded for any city that has more than double the national median for that measure.

2023 ParkScore[®] index: Access SANTA CLARITA, CALIFORNIA

The Access category of the ParkScore[®] index awards points based on the percentage of the population within a 10-minute walk of a public park. This analysis is provided via the ParkServe mapping application, which identifies the population living within a 10-minute walk of a park by creating dynamic 1/2-mile service areas (10-minute walking distance) for all public parks. In this analysis, service areas use the street network to determine walkable distance (streets such as highways, freeways, and interstates are considered barriers).

In Santa Clarita, 52% of the population lives within a 10-minute walk of a park. Among the remaining 107,255 people without access to a nearby park, Trust for Public Land suggests where to prioritize the development of new parks to reduce this gap. This prioritization is based on a comprehensive index of six equally-weighted demographic and environmental

metrics:

Population density*

 Density of low income households (households with income less than 75% of the urban area median income; less than \$100,000 in Santa Clarita)*
 Density of people of color*

 Community health (a combined index based on the rate of poor mental health and low physical activity from the 2022 CDC PLACES census tract dataset)

Urban heat islands (surface temperature at least 1.25 degrees greater than city mean surface temperature from Trust for Public Land, based on Landsat 8 satellite imagery)

Pollution burden (air toxics respiratory hazard index from 2022 EPA EJScreen)

*Based on 2022 Forecast block groups provided by ESRI

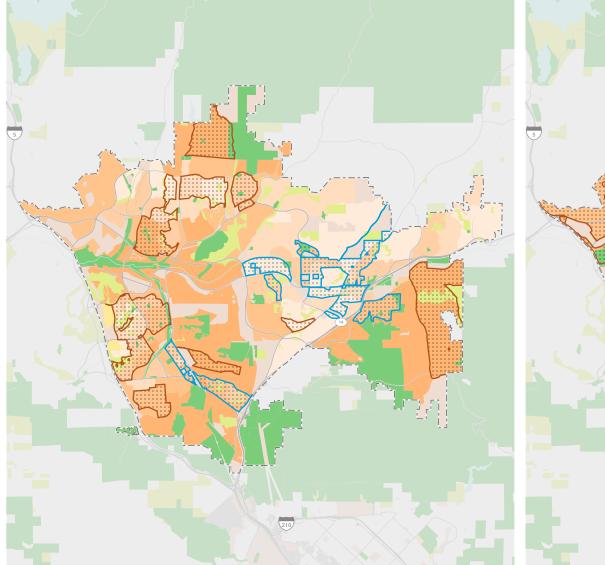

Priority areas for new parks	Cemetery		
(outside of 10-minute walk service areas of parks with public access) Very high priority	University		
High priority	Military		
Moderate priority	Industrial		
Park with public access	Vacant zero population area		
Other park or open space	- City boundary		
10-minute walk (half-mile) service area of park with public access	 County boundary

2023 ParkScore[®] index: Equity SANTA CLARITA, CALIFORNIA

The Equity category of the ParkScore® index awards points in part based on the difference in nearby park space between neighborhoods in a city:

•On a per person basis, ratio of nearby public park space between communities of color and white communities

•On a per person basis, ratio of nearby public park space between low-income communities and high-income communities

Nearby park space per person effectively measures the available park space within a 10-minute walk of a micro-neighborhood, identified as those with the highest concentrations (top 20% of all census block groups in a city) of people of color or white population and high-income or low-income households. Households with income less than 75% of city median income (less than \$100,000 in Santa Clarita) are considered low-income; households with income greater than 125% of city median income (greater than \$150,000 in Santa Clarita) are high-income.

In Santa Clarita, neighborhoods of color have 32% less park space than white neighborhoods, and low-income neighborhoods have 76% less than high-income neighborhoods.

The metrics for people of color reflect each of the Census-designated race/ethnicity groups: Black, Hispanic, and Indigenous and Native American, Asian Americans, Pacific Islanders, multiple races, and other communities of color.

Demographic profiles are based on 2020 Forecast block groups provided by Esri.
